

## APPENDIX B

Each of the following tables identifies the towns and waterbodies containing individual dredge sites. Each page contains a table for a single region organized alphabetically by town. The resource information is the most up to date resource information for a given waterbody and is described in “Recommended time of year restrictions (TOYs) for coastal alteration projects to protect marine fisheries resources in Massachusetts” (Evans et al. 2011). These tables do not identify TOYs that may be in specific permits; these tables identify the most up-to-date TOY recommendation for dredging projects. If an embayment has multiple branches (for example, Red Brook Harbor and Red Brook), the most conservative resource information was used.

All waterbodies listed have been mapped. The “mapped status” refers to whether or not the dredge site has been mapped. If a dredge site has not been mapped, it cannot be ascertained what waterbody feature may be impacted by dredging activity. In such cases, the most conservative (embayment) TOY recommendation is listed.

<u>Region</u>	<u>Page</u>
